

Doctor On Demand is here for the healthcare needs of women.

Women have an entirely unique set of complex needs. A better understanding of the common issues and their risk factors are essential to preventing major illnesses and maintaining good health.

Heart disease

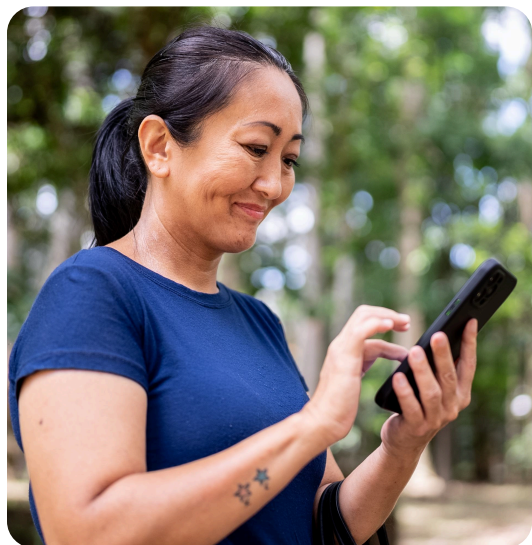

Heart disease can affect women at any age and is the leading cause of death among American women, causing about 1 in 5 deaths every year*. If you have a family history of heart disease or have high blood pressure or cholesterol, talk to your doctor about what you can do.

Breast cancer

Breast cancer is the most common cancer among women worldwide, with an estimated 2.3 million new cases diagnosed in 2020**. Getting yearly mammograms starting at the age of 40 is important. But if you have a family history of breast cancer, consult with your doctor about getting your mammogram earlier.

Reproductive health

Endometriosis, uterine fibroids, infertility, and menopause—there's a lot that can affect reproductive health. Whether you're trying to manage menopausal symptoms or having trouble getting pregnant, having the right doctor is the first step to getting the care you need.

Did you know?

15.6% of women ages 18 and older in the U.S. are in fair or poor health.*

How can Doctor On Demand help?

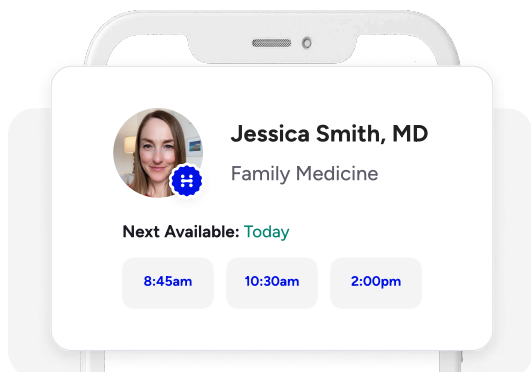

With Doctor On Demand, you can:

- See a doctor online in a matter of minutes if you're dealing with urgent issues like UTIs, postpartum symptoms, and more.
- Connect with a therapist or psychiatrist if you're struggling with the emotional and mental impacts of your health, including a cancer diagnosis, postpartum depression, menopausal symptoms, fertility issues, and more.

A wonderful way to see the doctor online without the hassle of going to ER or urgent care where you wait for hours and hours.”
